## Update to the Bathing Water Profile based on the report by the European Environment Agency issued in May 2025

Under the provisions of the Bathing Water Directive (BWD), 2006/7/EC, as transposed by Legal Notice 125 of 2008 and amended by Legal Notice 237 of 2011 87 bathing water monitoring points are monitored in the Maltese Islands. The monitoring data and other information regarding bathing water management are reported to the European Environment Agency at the end of the official monitoring season to assess and publish information on the state of the Bathing Water of the Maltese Islands. This bathing water profile is in accordance with, regulation 11, and Schedule III of the legal notice.

Bathing water profile 14 covers 2 monitoring points situated in the locality of Mellieha as per **Figure 2 & 3 and Table 1**. Located along Malta's northern coast of Cirkewwa. C07 is accessible from a steep stair adjacent to the parking area in Triq il Latinja. The picturesque site consists of a small sandy beach within a natural cove and rugged cliff-side scenery. C08 is in the vicinity of the Gozo ferry terminal and adjacent to Triq il-

Marfa. This sandy beach overlooks the islands of Comino and Gozo and is also predominantly composed of sand and rocky coastline.

The monitoring points C07 & C08 have been monitored for 23 weeks, by the Environmental Health Directorate. The monitoring period for the official bathing season starts on the third week of May till the third week of October. For the year 2024 the monitoring day where 13<sup>th</sup> May till 20<sup>th</sup> October.

The bathing water quality is based on two microbiological parameters (Escherichia coli and Intestinal enterococci). These two parameters determine the classification of the bathing water quality as 'excellent', 'good', 'sufficient' or 'poor'. The symbols shown in **Figure 1** below correspond to this classification. The European Environment Agency report for the year 2024 indicated that 92% of the bathing water classified as excellent quality, see **Figure 4**. (European Environmental Agency, 2025).

Table 3: Bathing water quality classification at (2021 - 2024)

2006/7/EC Classification based on four years data				
Bathing Water ID Numbers	Year	Escherichia coli	Intestinal Enterococci	Overall Classification
C07	2024	Excellent	Excellent	Excellent
C08		Excellent	Excellent	Excellent
C07	2023	Excellent	Excellent	Excellent
C08		Excellent	Excellent	Excellent
C07	2022	Excellent	Excellent	Excellent
C08		Excellent	Excellent	Excellent
C07	2021	Excellent	Excellent	Excellent
C08		Excellent	Excellent	Excellent

Further information on bathing water results is available on the Environmental Health Directorate website [www.bathingwater.gov.mt](http://www.bathingwater.gov.mt)

## Identification and assessment of causes of pollution that might affect bathing waters and impair bathers' health;

The risk factor for C07 & C08 monitoring sites is low risk. The risk factor was calculated on possible sources of contamination and the risk of occurrence. These include rainwater culverts and surface water runoff that discharge directly into the official bathing site, if there any sewage pumping station or main sewers in the vicinity, if currently there is a construction activity ongoing and if in the past four years there were reports of short-term pollution and or a bathing prohibition period.

The probability of temporally closing the monitoring site C07 & C08 is very low. This was calculated on the number of health warnings issued for the last four years.

### Temporary closing of bathing water sites during bathing season 2024

No sites covered by this Bathing Water Profile were temporarily closed during the bathing season of 2024.

### What should one do if a pollution incident is noticed?

If a risk of bathing water pollution (on-shore or off-shore) is noted, the Environmental Health Directorate is to be immediately notified by calling.

**21337333** during Office Hours:

**or**

**23343223 (Malta)/22156500 (Gozo)** after Office Hours / Weekends / Public Holidays:

Or sending an email on: [wrau.ehd@gov.mt](mailto:wrau.ehd@gov.mt)

When a complaint is received the Environmental Health Officers (EHOs) will investigate accordingly and if necessary, elevate samples. During the period of any short-term pollution and or bathing prohibition, the EHOs will elevate samples from the bathing site on a daily basis to monitor its quality.

Once the nuisance is resolved and the results of three consecutive bathing water samples conform to the parameters stipulated in the Legal Notice 125 of 2008, indicated that there is no risk to bathers, the warning will be lifted.
