## Update to the Bathing Water Profile based on the report by the European Environment Agency issued in May 2025

Under the provisions of the Bathing Water Directive (BWD), 2006/7/EC, as transposed by Legal Notice 125 of 2008 and amended by Legal Notice 237 of 2011 87 bathing water monitoring points are monitored in the Maltese Islands. The monitoring data and other information regarding bathing water management are reported to the European Environment Agency at the end of the official monitoring season to assess and publish information on the state of the Bathing Water of the Maltese Islands. This bathing water profile is in accordance with, regulation 11, and Schedule III of the legal notice.

Bathing water profile 23 covers 1 monitoring point situated in the locality of San Lawrenz as per **Figure 2 and Table 1**. Located along Gozo's western coast of San Lawrenz which is accessed either via a cave tunnel or through a road leading from the main parking area. It comprises of an enclosed pebble beach within Qawra's quasi-circular solution subsidence structure and the inland sea is relatively sheltered and not directly exposed to the coast. The terrestrial area at Dwejra has conserved most of its natural

context, with geological, geomorphological, ecological, archaeological, historical, and aesthetic features that classify it as uniquely important for the Maltese Islands. Surrounded by boathouses.

The monitoring point D08 have been monitored for 23 weeks, by the Environmental Health Directorate. The monitoring period for the official bathing season starts on the third week of May till the third week of October. For the year 2024 the monitoring day where 13<sup>th</sup> May till 20<sup>th</sup> October.

The bathing water quality is based on two microbiological parameters (Escherichia coli and Intestinal enterococci). These two parameters determine the classification of the bathing water quality as 'excellent', 'good', 'sufficient' or 'poor'. The symbols shown in **Figure 1** below correspond to this classification. The European Environment Agency report for the year 2024 indicated that 92% of the bathing water classified as excellent quality, see **Figure 3**. (European Environmental Agency, 2025).

Classification updated for the year 2024.

Figure 3: Results of bathing water quality in Malta from 2005 to 2024

**Trend of coastal bathing water quality in Malta. Notes:** Each column represents an absolute number of bathing waters in the season. The 'good' and 'sufficient' quality classes are merged for comparability with the classifications under the preceding Bathing Water Directive 76/160/EEC.

(European Environment Agency, 2025)

Table 2: Classification of bathing waters

	2006/7/EC Classification based on four years data					
<b>Escherichia coli (cfu/100 ml)</b>	< 250	Excellent quality	< 500	Good quality	> 500	Sufficient quality
<b>Intestinal Enterococci (cfu/100ml)</b>	< 100	Excellent quality	< 200	Good quality	> 200	Sufficient quality

## Identification and assessment of causes of pollution that might affect bathing waters and impair bathers' health;

The risk factor for D08 monitoring sites is low risk. The risk factor was calculated on possible sources of contamination and the risk of occurrence. These include rainwater culverts and surface water runoff that discharge directly into the official bathing site, if there any sewage pumping station or main sewers in the vicinity, if currently there is a construction activity ongoing and if in the past four years there were reports of short-term pollution and or a bathing prohibition period.

The probability of temporally closing the monitoring site D08 is very low. This was calculated on the number of health warnings issued for the last four years.

### Temporary closing of bathing water sites during bathing season 2024

No sites covered by this Bathing Water Profile were temporarily closed during the bathing season of 2024.

### What should one do if a pollution incident is noticed?

If a risk of bathing water pollution (on-shore or off-shore) is noted, the Environmental Health Directorate is to be immediately notified by calling.

**21337333** during Office Hours:

**or**

**23343223 (Malta)/22156500 (Gozo)** after Office Hours / Weekends / Public Holidays:

Or sending an email on: [wrau.ehd@gov.mt](mailto:wrau.ehd@gov.mt)

When a complaint is received the Environmental Health Officers (EHOs) will investigate accordingly and if necessary, elevate samples. During the period of any short-term pollution and or bathing prohibition, the EHOs will elevate samples from the bathing site on a daily basis to monitor its quality.

Once the nuisance is resolved and the results of three consecutive bathing water samples conform to the parameters stipulated in the Legal Notice 125 of 2008, indicated that there is no risk to bathers, the warning will be lifted.
