Bathing Water Profile

PROFILE 22 – Data updated for 2025

XLENDI: Xlendi Bay

13 August 2026

Direttorat ghas-Sahha Ambjentali
Environmental Health Directorate

Update to the Bathing Water Profile based on the report by the European Environment Agency issued in May 2026

Under the provisions of the Bathing Water Directive (BWD), 2006/7/EC, as transposed by Legal Notice 125 of 2008 and amended by Legal Notice 237 of 2011 87 bathing water monitoring points are monitored in the Maltese Islands. The monitoring data and other information regarding bathing water management are reported to the European Environment Agency at the end of the official monitoring season to assess and publish information on the state of the Bathing Water of the Maltese Islands. This bathing water profile is in accordance with, regulation 11, and Schedule III of the legal notice.

Bathing water profile 22 covers 4 monitoring points situated in the locality of Xlendi as per **Figure 2 and Table 1**. Located along Gozo's southern coast in Munxar. The Bay consists of a small pebble beach, and it is an inlet flanked by steep cliffs. Surrounded by natural vegetation, restaurants, and hotels.

The monitoring points D04, D05, D06 & D07 have been monitored for 23 weeks, by the Environmental Health Directorate. The monitoring period for the official bathing season starts on the third week of May till the third week of October. For the year 2025 the monitoring day where 12th May till 19th October.

The bathing water quality is based on two microbiological parameters (Escherichia coli and Intestinal enterococci). These two parameters determine the classification of the bathing water quality as 'excellent', 'good', 'sufficient' or 'poor'. The symbols shown in **Figure 1** below correspond to this classification. The European Environment Agency report for the year 2025 indicated that 88.5% of the bathing water classified as excellent quality, see **Figure 3**. (European Environmental Agency, 2026).

Identification and assessment of causes of pollution that might affect bathing waters and impair bathers' health;

The risk factor for D04 monitoring sites is low risk and , D05, D06 & D07 is medium risk. The risk factor was calculated on possible sources of contamination and the risk of occurrence. These include rainwater culverts and surface water runoff that discharge directly into the official bathing site, if there any sewage pumping station or main sewers in the vicinity, if currently there is a construction activity ongoing and if in the past four years there were reports of short-term pollution and or a bathing prohibition period.

The probability of temporally closing the monitoring site D04, is low and D05, D06, & D07 is medium. This was calculated on the number of health warnings issued for the last four years.

Temporary closing of bathing water sites during bathing season 2025

D04 to D07 sites covered by this Bathing Water Profile were temporarily closed during the bathing season of 2025 as per bathing prohibition report: <https://environmentalhealth.gov.mt/wp-content/uploads/2025/07/Report-STP- -BPR-for-D04-D07.pdf>

What should one do if a pollution incident is noticed?

If a risk of bathing water pollution (on-shore or off-shore) is noted, the Environmental Health Directorate is to be immediately notified by calling.

+356 2095 4992 during Office Hours:

or

+356 2545 0000 after Office Hours / Weekends / Public Holidays:

Or sending an email on: wrau.ehd@gov.mt

When a complaint is received the Environmental Health Officers (EHOs) will investigate accordingly and if necessary, elevate samples. During the period of any short-term pollution and or bathing prohibition, the EHOs will elevate samples from the bathing site on a daily basis to monitor its quality.

Once the nuisance is resolved and the results of three consecutive bathing water samples conform to the parameters stipulated in the Legal Notice 125 of 2008, indicated that there is no risk to bathers, the warning will be lifted.
